INTRODUCTION

Our mission at CharCoat Passive Fire Protection is to manufacture and supply our clients with the most technologically advanced coatings for the protection against fire. By securing our client's assets and safeguarding the functionality of their facilities, we aim to assist with their financial goals without the burden of fire, downtime, loss of revenue and insurance costs.

Our core focus is on the protection of Structural Steelwork and Electrical Cables, whether it be protection from fire, or from the environment (such as CharCoat Xtend™).

Our Signature products are Charcoat CC, an intumescent latex Cable Coating that can Fire Rate Electrical Cable up to 90 minutes, and our CharCoat SC Intumescent Steel Coating Range fire rated up to 2 hours. Coupled with our CharCoat FS range of Fire Stopping products, we complete a full range of products to stop fires where electrical cable and steelwork is concerned.

From the inception of a need through the completion of the project, CharCoat Passive Fire Protection is there every step of the way. Our commitment to our customers and assets means you can rely on dedicated professionals providing unwavering support for your business time and time again.

We continually seek new technologies and deliver value-added solutions to our customers through a comprehensive offering of quality products that support our core culture. Our focus is on the industrial, contracting, fire and marine safety, government, manufacturing, mining, transportation, utility, and oil and gas sectors.

HISTORY

In 1996, Sean Ritchie founder of CharCoat Passive Fire Protection commenced marketing Cable Coating in Australia/NZ for the protection of electrical cables. With a passion in protective coatings, he soon added Intumescent Structural Steel Fire Protection to the list. Sean has focused on protecting his clients' assets from destructive fires.

For over 20 years, CharCoat Passive Fire Protection (formally known as KBS Passive Fire) has been manufacturing and supplying PFP products to the global market place; specializing in Cable Fire Protection and Structural Steel Fire Protection. From our humble beginnings in Sydney Australia in 1996, SPR Management (Trading As) CharCoat Passive Fire Protection has created a trust within the marketplace with the quality of product and service. So much so that other Passive Fire Protection Companies contract us to help guide and set up new supply lines.

Today, CharCoat Passive Fire Protection products are manufactured in our factories located in the USA and the UK with warehousing solutions and distribution available in Asia and the Middle East. Whether it is Cellulosic or Hydrocarbon protection, electrical cable or steel, we have the solution for you.

| South Africa |

PRODUCTS

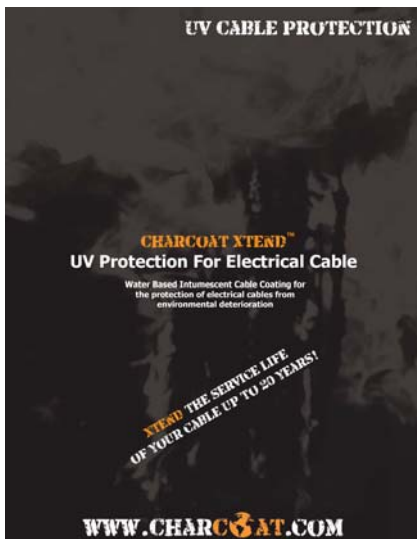

CHARCOAT CC

CharCoat CC Cable Coating is a water-based Intumescent Latex coating developed for the fire protection of single, grouped or bundled electrical cables.

CharCoat CC is a unique acrylic latex emulsion which has excellent resistance to weathering and aging and which remains flexible indefinitely allowing for cable movement and removal. It is suitable for exterior or interior applications.

With major approvals covered, CharCoat CC will also fire rate your cable systems.

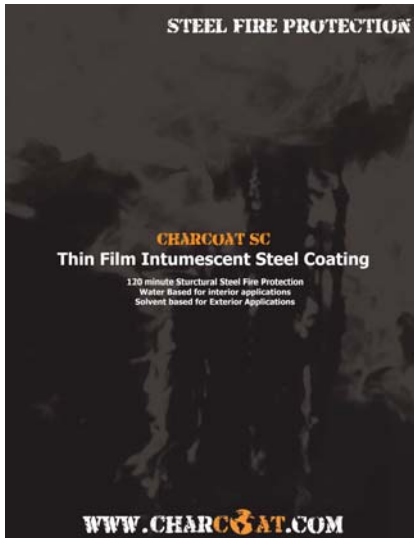

CHARCOAT XTEND

CharCoat Xtend™ is our proprietary program to prolong the service life of your existing exterior (and interior) electrical cables.

CharCoat Xtend™ utilizes the CharCoat CC Cable Coating system on electrical cables where the environment has deteriorated the cable sheath. Typically, this happens through extended (and sometimes shorter time periods) exposure to UV (ultra violet), mud from electrical cable pits, salt water and salt mist exposure (constantly found in offshore and onshore facilities) and Ozone degradation.

PRODUCTS

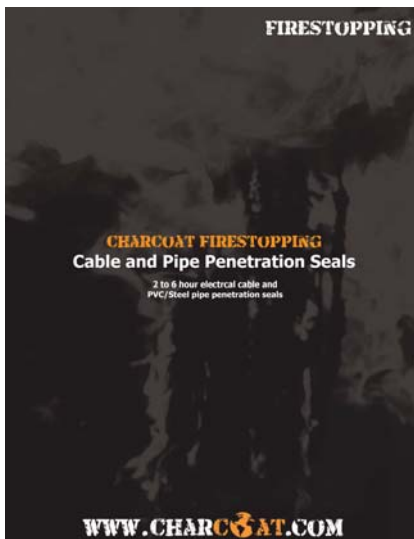

CHARCOAT SC

The CharCoat SC Range of Structural Steel Fire Protection is the pinnacle of technology and performance in Thin Film Intumescent Fireproofing.

The CharCoat SC Range can be applied to steelwork in interior or exterior applications. Our range of fireproofing products are spray applied and offer up to 120 minutes fire protection under BS476: Part 21. There is no reinforcement or mesh required.

CharCoat SC can be applied in residential, commercial and industrial applications where architectural designs call for a thin-film, aesthetic, highly decorative finish.

CHARCOAT FS

For over 20 years we have seen a multitude of firestopping products enter the market, and soon after disappear. But the constant Cable Penetration Seals, or Firestopping always reverts back to fire rated mortars, fire rated panels and fire rated Sealants, and of course the trusty fire rated collars.

The CharCoat Firestopping (FS) Range consists of these simple, proven solutions that are the stalwarts of the firestopping industry.

- CharCoat FS Mortar
- CharCoat FS Panel
- CharCoat Intu Sealant
